### Role of Medical Technologists in Health System

This keynote lecture was run by Dr. Charus Suwanwela. He said that medical technology is a broad field where innovation plays a crucial role in sustaining health. The field of medical laboratory was developed continuously, starting from 18<sup>th</sup> century which is the diagnosis system run on the symptoms and the history of the patients. Until 19<sup>th</sup> century, the physical sign of disease was used to predict the disease before the symptom appearance at the middle or late stage. In 1910, the basis of chemical medicine is another field developing for effective laboratory diagnosis. Several disease or abnormality were detected by the changing of chemical factors of clinical samples such as blood, urine etc. With the high sensitivity of these factors, they are very essential and be able to detect even at the early stage of disease. Advancements in medical technology have allowed physicians to better diagnose and treat their patients since the beginning of the professional practice of medicine. However, it is of noted that each region has their own genetic characteristics and also each person has their own life-style so this is another challenging for laboratory-clinical application.

# Highlight topic from 1<sup>st</sup> day of meeting

## English for medical service

This session presented by Mr. Adam Bradshaw. The speaker taught and presented some tricks to speak English clearly and effectively such as how to pronounce the difficult sound, especially “sh”, “ch” and “v”. Moreover, he also cheer up Thai people to practise English and did not be shine to speak with foreigner or native speakers. The more you practice, the better and more effective communication and speaking you will get.
