## One healthy: Harmony of healthy system

by Assoc.Prof. Parntep Ratanakorn

One health is composed of the dynamic relationship between human, animal and environment. Several human diseases originate from animal and wildlife. Human and animal health can't be solved without environmental management. This is the reason why "One health global network" has been launched. So as we are medical technologists, how we involved in one health? The answer is "build up the effective lab to control the emerging disease"

### Epidemic of Zika fever, are we well prepared?

*by Prof. Prasert Thongcharoen*

Zika fever is one the the emerging diseases. The key to control the emerging disease is “real-time response”. Once the disease is diagnosed, the disease controlling team need to be ready.
